To minimize the potential for exposure to bees or other pollinating insects, do not apply while bees seek food. Do not allow to move to flowering crops or weeds if the bees look for food. Minimize aerosol drift away from target area to reduce effects to other non-target insects.

ZELTO® has been evaluated for toxicity to non-target insects in a variety of bioassays and in a variety of crops under various normal growth conditions. However, testing for all beneficial insects, in all situations, mixtures and

combinations, is not feasible. Before treating the whole crop, where the release of beneficial insects serves as part of the Integrated Pest Management (IPM) program, consult with an extension specialist, a pest management consultant (PCA) or the manufacturer of the product.

For terrestrial uses only: Do not apply directly to water, or in areas where surface water is present, or for intertidal areas below the tide mark. Do not contaminate water with equipment wastes or rinse liquid.

Sensitive areas: The pesticide should be applied only when the possibility of moving to susceptible adjacent areas (e.g. residential areas, bodies of water, known habitat of endangered or endangered species, non-target crops) is minimal, e.g. when the wind blows away from sensitive areas). Do not allow the spray to disperse from the application site and contact people, structures occupied by persons at any time and associated properties, parks and recreational areas, non-target crops, aquatic areas and wetlands, forests, grasslands, or animals. Do not allow to move to flowering crops or weeds if the bees look for food. Minimize aerosol drift away from target area to reduce effects to other non-target insects.

Potential for bioconcentration: Bioconcentration of this product in organisms is not expected.
